Ongoing trade and debt uncertainties

- ◆ Progress on trade deals calmed the tumbling survey data in May, but the hard data may be starting to soften...
- ◆ ...at a time when fiscal concerns have revived and the future course of US import tariffs hinges on the courts of appeal...
- ◆ ...adding to challenges for businesses and monetary policy

US trade and fiscal policy has dominated the global narrative over the past month. Progress on framework trade deals with the UK and, more importantly, China, following on from the 90-day pause on the highest reciprocal tariffs announced on 9 April, calmed some of the fears about worst case scenarios on US tariffs. This, in turn, helped revive equity markets, while the **May business and consumer confidence survey data stabilised or improved** after the dismal April readings.

1. Equity markets revived on the more positive trade news

Tariff challenges

Trade uncertainty still reigns though, following the US Court of International Trade (CIT) ruling that the US President had overstepped his authority by imposing reciprocal tariffs globally using the International Emergency Economic Powers Act (IEEPA). While the US administration immediately lodged an appeal and won a temporary 'stay' on the CIT's order to remove the IEEPA tariffs, US importers and consumers, as well as foreign exporters, **cannot know whether some tariffs will be sustained or cancelled after the appeal**, or even increased post 9 July.

Tariff uncertainties remain an overhang for businesses

Debt concerns

If there is a loss of tariff revenues, which rose in April, it will have no direct implications for the so-called Big Beautiful Bill (BBB) Act as there was no explicit connection to tariff revenues in the Republican budget reconciliation package now in the Senate. However, the latter was already a major factor in Moody's May downgrade of the US sovereign credit rating which coincided with heightened market concerns over the hefty budget deficit and **much higher debt projections implied by the BBB**. The US 10-year yield hit 4.6% and the 30-year hit 5%, keeping US mortgage rates high.

Divergent data

Yields have now edged lower again amid a few signs that the hard US data, which have generally still been more resilient than surveys, **may finally be softening a touch**. Non-farm payrolls increased at a slightly slower pace in May, while unemployment remained unchanged at 4.2%. Although layoffs in the US remain low, the rate of hiring has slowed. In Europe and in parts of Asia Q1 GDP was stronger than expected, helped by frontloading ahead of tariffs, but Q2 industrial data are mostly showing signs of softening.

US hard data may be starting to come off the boil

3. US non-farm payrolls rose by 139k in May, slightly lower than in April

4. New job postings remain weak in developed markets

Falling inflation

US inflation releases for April were lower, but the Federal Reserve will remain **wary of inflation expectations** as tariff effects feed through: early signs of rising input cost were evident in the US manufacturing and services PMI/ISM data and May wage data were higher. Eurozone inflation fell below 2% in May as Easter effects unwound and lower energy prices and a stronger euro should mean **it falls further**, even if global food prices (dairy and meat) continue to edge higher. The European Central Bank (ECB) is in a good place after cutting interest rates to 2%, which could prove to be the last cut of the cycle, but we still see disinflationary effects against a backdrop of already low inflation driving policy rates lower across Asia, except Japan.

Eurozone inflation may continue to fall

Key recent releases

Date	Market	Release	Period	Actual	Consensus expectation	Prior	Actual vs. Consensus
19 May	Mainland China	Retail sales (% y-o-y)	Apr	5.1%	5.8%	5.9%	↓
19 May	Mainland China	Industrial production (% y-o-y)	Apr	6.1%	5.7%	7.7%	↑

Important information on sustainable investing

"Sustainable investments" include investment approaches or instruments which consider environmental, social, governance and/or other sustainability factors (collectively, "sustainability") to varying degrees. Certain instruments we include within this category may be in the process of changing to deliver sustainability outcomes.

There is no guarantee that sustainable investments will produce returns similar to those which don't consider these factors. Sustainable investments may diverge from traditional market benchmarks. In addition, there is no standard definition of, or measurement criteria for sustainable investments, or the impact of sustainable investments ("sustainability impact"). Sustainable investment and sustainability impact measurement criteria are (a) highly subjective and (b) may vary significantly across and within sectors.

HSBC may rely on measurement criteria devised and/or reported by third party providers or issuers. HSBC does not always conduct its own specific due diligence in relation to measurement criteria. There is no guarantee: (a) that the nature of the sustainability impact or measurement criteria of an investment will be aligned with any particular investor's sustainability goals; or (b) that the stated level or target level of sustainability impact will be achieved.

Sustainable investing is an evolving area and new regulations may come into effect which may affect how an investment is categorised or labelled. An investment which is considered to fulfil sustainable criteria today may not meet those criteria at some point in the future.
